Programming Languages: Python, Java, C++, R, HTML, CSS, ReactJS,

Frameworks: TensorFlow, Spring, Flask

Technologies: Git, Github, MongoDB

Education

University of Massachusetts Boston

Expected May 2026

- Bachelor of Science in Computer Science, GPA: 3.2/4.0

Relevant Coursework

- Introduction to Python
- Intermediate Computing with Data Structures & Algorithms – Java
- Programming in C++
- Probability & Statistics

Certifications

- IBM Python for AI and Data Science Certificate Jan 2024
- Introduction to TensorFlow - Artificial Intelligence and Machine Learning Sept 2021

Experience

Arizon Systems Private Limited

May 2024 - Aug 2024

Software Engineer Intern

Bangalore, INDIA

- Engineered and developed a ML-based Data Extraction solution to process handwritten and tabular data from pharmaceutical forms, achieving 91% accuracy on 500+ forms, processing efficiency by 40% and saved over \$40,000 in SaaS subscriptions.
- Developed and implemented a predictive financial analysis model utilizing machine learning techniques to identify key market trends, investment opportunities and improving forecast accuracy, with a 70% validation rate by financial analysts.
- Designed and implemented a user-management system that enhanced user accessibility by 30% and ensured 100% compliance with organizational standards, supporting a 25% increase in user engagement on the platform.

Smile Foundation

Sept 2022 - Nov 2022

Frontend Developer Intern

Bangalore, INDIA

- Developed and optimized user-friendly donation forms, simplifying the contribution process, which helped raise 50,000 INR for underprivileged families and students.
- Designed and developed the front-end of the Smile Foundation's fundraising platform, enhancing user experience and boosting online donations by 30%.
- Led community outreach initiatives, using the platform to promote fundraising events, which resulted in a 50% increase in participation and contributions.

Projects

Bank management system | (Java, Swing, MySQL)

Aug 2023

- Streamlined a Bank Management system, reducing manual data entry time by 60% and enhancing data accuracy to 95%
- Iteratively Improved transaction efficiency by 40%, user registration by 25% and account management simplicity.

Search engine autocomplete program | (Java)

Apr 2023

- Programmed an autocomplete program resulting in a 40% improvement in query processing speed using advanced algorithms and data structures.
- Achieved a processing rate of over 1,000 queries per second, significantly enhancing user experience and application responsiveness through integration testing.

Chatting application | (Java)

Apr 2023

- Implemented a scalable server-client architecture using message queuing and event handling
- Engineered the development of real-time chatting application leveraging socket programming and multithreading.
